The versatility of the DTC4500e is unsurpassed. Driven by an extremely robust and reliable print engine, this high-volume printer delivers speed, power and versatility rolled into one.

High-capacity ribbons enable the DTC4500e to print twice as many full-color cards as most printers before the ribbon has to be changed, providing continuous high-quality card printing and encoding.

The DTC4500e combines high security and convenience to easily print what you need, including:

- **High-volume performance** – Built for organizations requiring robust, high-volume printing every day. Standard features include high-capacity ribbon supplies and dual-input card hoppers that allow for maximum card input capacity and management of multiple card types.

- **End-to-End Control, Flexibility and Security** – The optional iCLASS SE encoder (part of the iCLASS SE open encoder platform) can be fully integrated into your printer, allowing you to create, encode (read/write) and manage your secure credentials from start-to-finish. Design personalized ID badges locally and then program them to work with your current physical access control system (PACS), streamlining your ordering, inventory management, and issuance processes.

- **Highly versatile** – The modular design enables organizations to build on their investment by adding field-upgradeable modules for dual-sided printing, lamination and technology card encoding.

- **Easily integrates into existing IT infrastructures through the built-in Ethernet and USB connection, allowing for centralized or remote ID card issuance.**

- **Maximum protection** – Protect blank card stock and printed/encoded cards with optional locking card hoppers.

- **Highly secure** – The optional iCLASS SE encoder provides an additional layer of security to your identity program by allowing for processing of Secure Identity Object (SIO) data, and enabling the printer to become a Trusted Identity Platform (TIP) endpoint.

- **Card lamination for applying over laminates to produce highly-secure cards that resist forgery and increase card durability.** Unique, dual-sided simultaneous lamination saves time with increased throughput.

- **Technology encoding modules encode data for magnetic stripe, proximity, contact and/or contactless technology cards, such as iCLASS SE® and MIFARE which enable access control or other applications.**

**Print speed indicates an approximate print speed and is measured from the time a card drops into the output hopper to the time the next card drops into the output hopper. Print speeds do not include encoding time or the time needed for the PC to process the image. Process time is dependent on the size of the file, the CPU, amount of RAM and the amount of available resources at the time of the print.
